

# FACILITY HEALTH MANAGEMENT

Facility health and safety has never been more important, especially as millions of businesses and institutions around the world look to recover from the COVID-19 pandemic. There's a strategic path, however, that can help to ensure the health and safety of both employees and customers.

Comprehensive "Facility Health Management" includes physical upgrades and ongoing management to support wellness. It also provides special attention to operation and re-occupancy protocols for buildings that are unoccupied for an extended period.

Whether you're operating a manufacturing plant, restaurant, school/campus, transportation center, retail store, or any other type of facility or public space, you need to consider an array of potential health risks for those who visit the building.

Our goal is to provide our customers with assurance that their physical assets are safe and healthy for re-occupancy and use while getting back to work, school, play and living.

## Our Team

Intertek's team of experts: engineers, architects, building scientists, and industrial hygienists can work with you to assess your building's performance. For qualifying buildings, a Protek Certification will be issued as well as their building on Intertek's Listing page.

## Services

Intertek can lead the entire conversion with turnkey services, or serve as a consultant to the owner, working alongside independent design and construction teams. Our services include:

### Initial Evaluation

Our team of experts will meet with the client virtually or on site to discuss the building, its history and unique features. We will also provide baseline testing.

Our site visit would include reviewing:

- Indoor air quality, filtration and ventilation
- High touch surfaces
- Cleanliness evaluation
- Staff training/communication review
- Buildings that have sat dormant may require additional evaluations

### Facility Assessment

Intertek will complete a facility health and safety assessment based on our score card, comparing against the level of compliance the client selects. If applicable, we will provide specific recommendations for measures to support occupant health and reduce virus transmission and other infection risks. The recommendations will cover both on-going operations and potential capital improvements.

## Remediation

If non-compliant elements are identified in the Facility Assessment, owners who wish to achieve compliance and/or certification will choose to engage Intertek in one of several levels of participation in the remediation design and installation. We will develop the remediation plan, provide guidance and monitor remediation. The owner may implement remediation with their in-house team or contractors, or they may hire Intertek for turnkey design and remediation services.

## Compliance Reporting

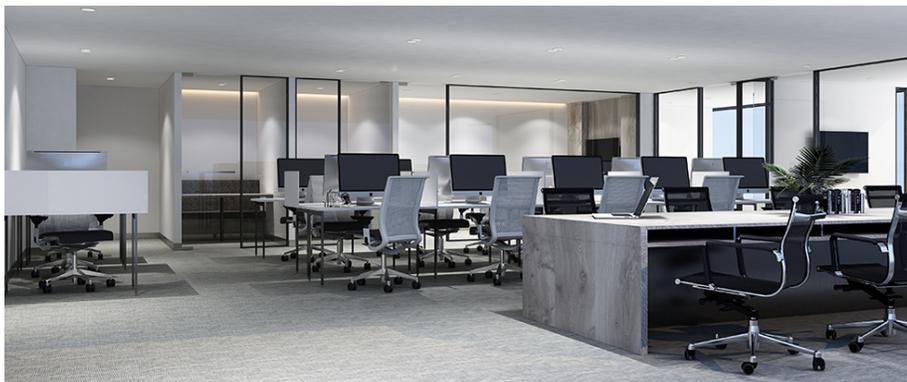

Intertek will prepare a comprehensive report and scorecard documenting compliance.

## Certification

The certification will allow the owner to provide their stakeholders with assurance that they have effectively implemented appropriate best practices in compliance with Intertek's program and scorecard to limit virus exposure and transmission risks within the facility and improve the health and safety of the facility.

## On-going Monitoring and Recertification

Intertek will provide annual monitoring to assure that compliance with the current program requirements are met and to maintain a current certification and listing.
